

are you
ready to
ride the
WAVE?

Use your smart device to connect to the new Wave from Worcester, a smart, internet-connected programmable control for central heating and hot water.

simple to fit

The Wave is easy to install, requiring just a low voltage 2-core wire connection between the control and the boiler. All other connections are via the Wi-Fi network.

Unlike standard weather compensation controls, the Wave does not need an external wired sensor. Instead, the Wave uses online data which significantly reduces installation time and cost to the end user.

Ideal for homes and small businesses, the Wave is compatible with many Greenstar gas-fired boilers. For full details see the Worcester website.

All you need is:

- Worcester Wave control
- Compatible Worcester boiler
- Wi-Fi enabled broadband router – 802.11 b/g
- The Wave app on a compatible Apple® or Android™ device.

Compatible with the following Greenstar gas boilers:†

- Greenstar CDi boilers: combi and system* boilers manufactured after 16th January 2007 with software version CF12.10 onwards.
- Greenstar Si and i System* boilers: manufactured from February 2011 onwards, models produced earlier than this date are not compatible.
- Greenstar i Junior boilers: manufactured from July 2013 onwards, models produced earlier than this date are not compatible.

*Greenstar CDi System and Greenstar i System boilers must have the optional integral diverter valve fitted to work with the Wave control. †Correct at time of printing.

simple to use

The Wave's intuitive and modern design ensures it is very simple to operate using either its in-built touchscreen or via the Wave app. Users simply download the Wave app to their compatible device to take control of their heating system from anywhere in the world where an internet connection is available.

There are no subscription fees or chargeable app add-ons, therefore updates to the app software are completely free of charge.

An installation and operating manual is provided with each control and there are a number of helpful videos to provide further detail on specific functions.

Should you temporarily lose your internet connection, the Wave will continue to operate as an intelligent heating and hot water control simply by using the last saved programme settings.

Wave compatible devices:*

Apple® devices running
iOS 5.1 and higher

Android™ devices running
2.2, 2.3 or 4.0 and higher

The Wave app is intuitive
and easy to navigate.

*Correct at time of printing.

simply smarter

The Wave's advanced programming enables it to have an 'intelligent conversation' with the boiler to take advantage of control features such as weather and load compensation. This ensures that the boiler modulates its performance to meet the needs of each household, providing the optimum balance of comfort and efficiency.

The Wave app allows you to see a chart of your heating and hot water usage so that you can easily identify where potential savings could be made. For example, when you turn your room temperature down a leaf symbol will appear to indicate additional savings are being made.

In the forthcoming ErP Directive (Energy-related Products Directive) coming out of Europe, smart controls like the Wave are recognised as improving the system efficiency by at least 4%, resulting in lower fuel bills.

simply contact us

Worcester's customer support team is recognised as one of the finest in the country. Based in Worcester, our dedicated team of experienced technical experts provides answers to queries across the entire Worcester range for both current and past products.
