

GUIDE TO THE USE OF THE ST9400A PROGRAMMER:

The purpose of the Programmer is to control the times when the heating and hot water can be switched on.

Normal Use:

Lift the flap to make sure the Slider is in the **RUN** position.

Also make sure that both hot water and heating are operating in **AUTO** or **ONCE** mode, by pressing the **MODE** buttons repeatedly until the display shows **AUTO** or **ONCE**.

AUTO means on and off twice each day, following the programme.

ONCE means coming on at the first programme time then off at the last programme time.

To turn the hot water and heating OFF:

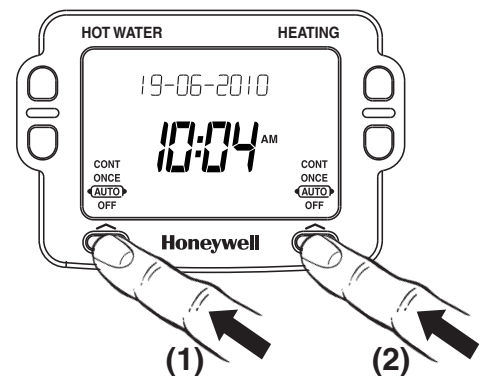

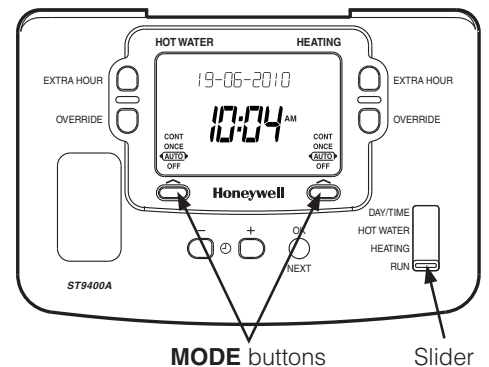

(1) Keep pressing the hot water **MODE** button until the display shows that hot water is **OFF**. If the hot water was on, the light will turn off.

(2) Keep pressing the heating **MODE** button until the display shows that heating is **OFF**. If the heating was on, the light will turn off.

To turn the hot water and heating ON:

(1) Keep pressing the hot water **MODE** button until the display shows **CONT** (this is short for continuous). The hot water light will turn on. The hot water will not turn off in this position.

(2) Keep pressing the heating **MODE** button until the display shows **CONT** (this is short for continuous). The heating light will turn on. The heating will not turn off in this position.

Temporary Overrides to the Set Programme:

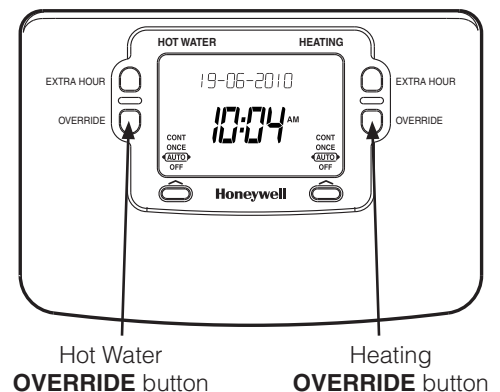

To turn the hot water ON press the hot water **OVERVERRIDE** button – the light will turn ON, unless the hot water is operating in the OFF mode.

To turn the hot water OFF press the hot water **OVERVERRIDE** button again – the light will turn OFF.

This button will only work in the **AUTO** or **ONCE** modes. It will NOT work in the **OFF** or **CONT** modes.

At the next SET time the Programmer will go back to automatic operation.

(The same applies to the heating **OVERVERRIDE** button)

For a temporary boost of heating or hot water, press the corresponding **EXTRA HOUR** button.

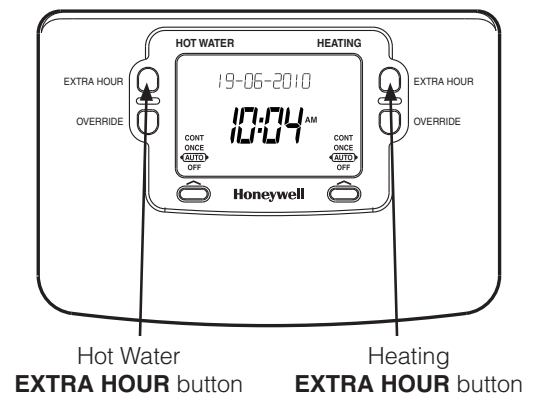

Pressing once brings the heating or hot water ON for 1 hour.

Press twice for 2 hours extra, three times for 3 hours extra.

Pressing again will turn the heating OFF.

This button works in the **AUTO**, **ONCE**, and **OFF** modes. It will NOT work in the **CONT** mode.

If the heating or hot water is already ON, pressing the corresponding **EXTRA HOUR** button will add the extra hours to the end of the current ON period.

For guidance on the operation of the other buttons please refer to the complete user instructions supplied with the product.
