# CONGRATULATIONS

Your heating engineer has installed a high quality product.

## BENEFITS FOR HOMEOWNERS

Increase comfort by keeping your room at the perfect temperature

A well-balanced heating system can provide energy savings of up to 35%

Compared to manual valves, accurate Thermostatic Radiator Valves provide energy savings of up to 28%

Each degree the average room temperature can be lowered achieves up to 11% energy savings of the property

Have you ever experienced **radiators not heating up while others are too hot to touch?** This happens due to an unbalanced heating system.

## WHAT DOES THAT MEAN?!

As water is lazy it will always take the path of least resistance. As a result the radiator nearest to the pump happens to be the hottest in your home. So far so good. Unfortunately the water doesn't like the path with the highest resistance, leading to cold radiators further away from the pump with a lack of heating water flowing through them.

## HOW TO OVERCOME?

With Automatic Flow Control developed and patented by IMI.
