Tools You'll Need

Spare Parts

To replace any spare parts for your tap, why not scan the QR Code or visit www.bristan.com and search for your product.

Prior to Installation

All products manufactured and supplied by Bristan are safe provided they are installed, used correctly and receive regular maintenance in accordance with these instructions.

This product has been tested to the Water Regulations Advisory Scheme (WRAS) and satisfies the requirements of the Water Supply (Water Fittings) Regulations 1999 and current bylaws. For full Installation Requirements & Notes (IRN) please visit wras.co.uk/directory.

Isolation valves must be fitted to the inlet water supplies to ensure ease of future maintenance.

Before installing these taps the water supply must be thoroughly flushed in order to remove any swarf, solder etc.

This product must not be modified in any way as this will invalidate the guarantee.

Flexible Connecting Pipes

Pack Contents

Installation

1 Remove the protective cap from the base assembly.

Feed the base through the sink hole from the top.

If the surface the tap is being fitted to is over 8mm; or you feel the tap needs extra stability, follow the **alternative installation steps** overleaf.

2 Drop the Plain Inlet Connector into the base.

REMEMBER Make sure the base is centralised when viewed from the front of the tap.

Ensure flat area of the plain inlet connector is sitting flush adjacent to threaded inlet connector.

3 Turn the hexagonal key clockwise until the base is secured.

4 Screw the flexible tails into the base. **DO NOT OVER-TIGHTEN**. Hand tighten.

REMEMBER hot on the left, cold on the right.

5 Connect the hot and cold water connections.

Olive
Compression Nut

6 Grease the O-Rings using the Molykote Grease provided.

7 Place your desired tap onto the base.

IMPORTANT Ensure the tap is correctly positioned and fully located on the base.

8 Secure in place with the grub screws using the tool provided.

9 Thread the hexagonal key through the EasyFit tool and tighten the grub screws with an extra 1/2 turn.

Your tap is now ready to use.

General Cleaning

Bristan products are made from premium materials, with hand polishing and electroplated finishes.

Your taps or shower should be regularly cleaned with warm water, a mild pH-neutral liquid soap, and polished with a soft cloth. Any residues from soap, toiletries etc. should be rinsed off straight after use.

Household bleaches and cleaners contain harsh chemicals and may damage the surface finish. Avoid using abrasive cloths, scouring pads, scrub sponges, steel wool or anything similar.

Some surfaces such as nickel and pewter may be affected by the dye found in some cloths, so it is also important to avoid hanging cloths on spouts.

Operation - Eco-Start

Starting temperature is cold. The temperature will gradually rise the further the rotation of the handle.

Once the handle ceases to turn, it will be **supplying the maximum temperature.**

Increase temperature

Maintenance - Cartridge Removal/ Replacement

- Remove the handle and shroud. **IMPORTANT** Isolate the water supply before starting!
- Unscrew the retaining nut and remove cartridge.
- Scan the QR Code and search for your product code to replace the cartridge for your tap.
- Reverse the steps to replace the valves and handles.
- Turn on the mains water supply, letting the water flow for a few minutes to flush through the system.

Alternative Installation for Surfaces Out of Tolerance/Extra Stability

- Turn the hexagonal key anti-clockwise to remove the back nut from the EasyFit Base.
- Feed the base through the sink hole from the top.
- REMEMBER: Make sure the base is centralised when viewed from the front of the tap. Feed the Reinforcing Plate (if required) and Back nut up to the underside of the sink.
- Turn the hexagonal key clockwise to secure the EasyFit Base.
- Proceed to Step 4 of the Installation Steps.

Troubleshooting

Symptom	Cause(s)	Remedy
No flow or low flow rate	Partially closed isolation valve.	Open isolation valve.
	Head of water is below the minimum distance required.	Refer to your specification for the minimum working pressure/ distance required
	Hot or cold water being drawn off elsewhere causing pressure changes or instantaneous boiler temperature changes.	Do not use other water outlets when using the taps.
	Airlock or partial blockage in the supply pipework or hoses.	Flush through pipework to ensure removal of debris and any airlocks.
	Water supply failure	Investigate water supply. Check your plumbing and heating systems for any faults.
Water dripping from taps	This is normal for a short time after using the taps.	This is caused by residual water tension, the build up of water in the tap body.
	If water continues to drip, possibly due to the ceramic disc valves/cartridge	Refer to the Maintenance section to replace the valves/ cartridge.
Taps do not turn on	Closed isolation valve.	Open isolation valve.
	Mains water supply turned off.	Turn on mains water supply.

A Masco Company

Maintenance - Cleaning/Replacing Outlet

- Unscrew the aerator using M24 outlet key.
- Remove the aerator from the spout. Clean and replace as necessary.
- Secure the aerator. Turn on the mains water supply, letting the water flow for a few minutes to flush through the system.
